Designing Remove Before Flight tags

Remove Before Flight key tags are produced using one of three methods: woven, embroidered, or printed. The Merrow border is added as the final step in the manufacturing process. For embroidered patches, the Merrow border width is 3/32" (0.12"). For woven and printed patches, the border width is 0.10".

The keyring position is fixed by default, so be sure to account for this when designing your Remove Before Flight keychain artwork.

The most commonly used typeface for the "RBF" text is Bebas Neue (Bold).

NASHVILLE, TN
